

Business Requirements Document (BRD)

E-commerce & Campaign Profitability Analyzer

1. Project Information

Project Type: Business Analysis, SQL & Analytics

Primary Objective: Create a reconciled view of e-commerce and marketing profitability.

2. Business Problem

Marketing evaluates performance using campaign spend, gross checkout revenue, and ROAS. Finance requires a view that accounts for discounts, product costs, cancellations, refunds, payments, and marketing spend -creating inconsistent measures of business performance across teams.

The proposed solution is an integrated analytical system connecting marketing, customers, orders, products, payments, and refunds.

3. Business Objectives

- Provide a reconciled view of profitability
- Measure campaign and advertising-platform performance
- Identify high-value and dormant customers
- Track payments and refunds
- Measure monthly revenue growth
- Provide consistent business definitions for financial metrics

4. Stakeholders

Stakeholder	Business Need
Finance	Profitability and financial reconciliation
Marketing	Campaign and channel performance
Marketing Leadership	Channel prioritization
CRM / Retention	VIP and dormant customer identification
Management	Overall business performance
Business Analyst	Requirements, business rules, testing and reporting

5. Business Requirements

BR-1 -Reconciled Profitability

Business Need	Finance needs contribution profit after discounts, COGS, and marketing spend, applying the defined treatment for cancelled and refunded orders.
Requirement	The system must provide reconciled profitability metrics using documented calculation rules.
Success Criteria	Profitability reporting follows consistent, documented business rules.

BR-2 -Campaign & Channel Profitability

Business Need	Marketing leadership needs to compare advertising platforms by financial contribution.
Requirement	The system must calculate and rank advertising channels using the selected profitability metric.
Success Criteria	A channel ranking can be generated using reconciled profitability metrics.

BR-3 -VIP Customer Retention

Business Need	CRM and Retention teams need to identify high-value customers who may have become dormant.
Requirement	The system must identify customers with qualifying completed spend of $\geq \$1,500$ and flag VIP customers with no qualifying order for 60+ days.
Success Criteria	VIP customers meeting the dormancy condition are identified.

BR-4 -Revenue Growth

Business Need	Management requires visibility into the monthly revenue trajectory.
Requirement	The system must calculate monthly revenue and Month-over-Month revenue growth.
Success Criteria	Monthly revenue and MoM percentage change are available for reporting.

BR-5 -Cash & Refund Reconciliation

Business Need	Finance needs to reconcile orders with payment and refund transactions.
Requirement	The system must provide transaction-level payment and refund analysis.
Success Criteria	Payment/refund totals can be compared against the order population and discrepancies identified.

BR-6 -Product-Level Economics [Not yet implemented]

Business Need	Finance and Product teams need profitability visibility by product and category.
Requirement	The system must calculate revenue, discounts, COGS, and contribution metrics at product/category level.
Success Criteria	Product and category profitability can be analyzed consistently.

6. Key Business Questions

Answered by the current implementation:

1. Which marketing platforms generate the highest contribution profit?
2. What is the reconciled ROAS by platform?
3. Which customers have qualifying lifetime spend of $\geq \$1,500$?
4. Which VIP customers have been dormant for 60+ days?
5. What is monthly revenue and MoM growth?
6. Which orders have payment or refund discrepancies requiring reconciliation?

Scoped out (candidate extensions): refund rate by product/category; payment method with largest unreconciled amount; explicit high-spend/low-contribution campaign flag; New/Returning/Dormant customer segmentation.

7. High-Level Business Outcome

Marketing → Customers → Orders → Products → Payments → Refunds → Profitability
Requirements → Business Rules → Data Model → SQL → Testing → Reporting → Business Insights
