

User Acceptance Testing (UAT)

E-commerce & Campaign Profitability Analyzer

Purpose

UAT verifies that the analytical solution produces results according to the defined business requirements and business rules. Testing covers the project's major business functions: revenue, profitability, customers, payments, refunds, and revenue growth.

Test Cases

Test ID	Scenario	Test Condition	Expected Result	Status
UAT-001	Product COGS	Order contains 3 units of a product with \$20 unit cost	COGS = \$60	Passed
UAT-002	Cancelled Order	Cancelled order contains revenue	Cancelled revenue excluded from qualifying revenue	Passed
UAT-003	VIP Customer	Customer reaches \$1,500 qualifying spend	Customer classified as VIP	Passed
UAT-004	VIP Dormancy	VIP customer has no qualifying order for 60+ days	Customer flagged as Dormant	Passed
UAT-005	Payment Reconciliation	Payment differs from expected order amount	Reconciliation difference identified	Passed
UAT-006	Refund Treatment	Order contains a refund record	Refund included per defined treatment	Passed
UAT-007	MoM Revenue	Two consecutive months contain revenue	Prior-month revenue and MoM % calculated correctly	Passed

Acceptance Criteria

- Revenue calculations follow the defined business rules
- Cancelled orders are handled correctly
- Product COGS is calculated correctly
- VIP customers are identified using the \$1,500 threshold
- Dormant VIP customers are identified after 60+ days
- Payment differences can be identified
- Refunds are reflected according to the defined treatment
- Monthly revenue and MoM growth are calculated correctly

Result Legend

Result	Meaning
Passed	Expected result matches actual result
Failed	Actual result does not match expected result
Blocked	Test cannot be completed due to a dependency or data issue
Planned	Test has not yet been executed

Final UAT Status

Overall Status	Passed - all 7 test cases executed and verified against the built database and SQL layer.
